# HASHMAPSTORE

A utility that Converts Text files to Hashmaps and vice versa; An alternative to Databases.

HOW TO USE IT?

See Example.java

WHAT'S THE MAIN IDEA BEHIND THE PROJECT?

An alternative solution for Credentials Storing on Databases.

WHY US?

It is challenging to learn SQL, or similar technologies, for doing simple tasks (e.g., Credentials storing). As long as you want to put your own Encryption and/or Decryption Functions, you do not need some kind of network connection or interaction with the database.

CHANGELOG

August 23, 2020 - HashMap uses ConcurrentHashMap instead.
